ABSTRACT

Several 3-hepta-O-acetyl-β-D-maltosylimino-5-arylimino-1,2,4-dithiazolidine hydrobromides (IV a-g) have been synthesized by debenzylation and cyclization of 1-aryl-5-hepta-O-acetyl-β-D-maltosyl-2-S-benzyl-2,4-isodithiobiurets with bromine in chloroform. The identities of these newly synthesized compounds were established on the basis of elemental analysis an IR, 1HNMR and Mass spectral analysis.

Keywords: Synthesis, Cyclization, Isodithiobiurets, Dithiazolidine hydrobromides.

INTRODUCITON

Maltosyl isothiocyanates are versatile synthetic intermediates that have been used in the field of synthetic carbohydrate chemistry. The maltosylated derivatives show great potential in biological process and in medicinal chemistry. They acts as bacteriostatic agent, antifungal agent and antitumour agent. Synthesis of Nitrogen and Sulphur containing five and six membered heterocyclic compounds have been exhaustively investigated by several chemists. The 1,2,4-thiadiazoles are found highly potent as inhibitor of HIV-1 and shows antibiotic activity. The 1,2,4-dithiazolidine have been subject of great interest because the drugs containing 1,2,4-dithiazolidine show diverse range of physiological activities such as plant growth promoting activity, antituberculosis, anticancer and antidiabetic activity. In view of applications we are interested to synthesize 3-hepta-O-acetyl-β-D-maltosylimino-5-arylimino-1,2,4-dithiazolidine hydrobromides (IVa-g) by debenzylation and cyclization of 1-aryl-5-hepta-O-acetyl-β-D-maltosyl-2-S-benzyl-2,4-isodithiobiurets with bromine in chloroform. The identities of these newly synthesized compounds were established on the basis of elemental analysis an IR, 1HNMR and Mass spectral analysis.

EXPERIMENTAL

Melting points were taken in open capillary tubes and are found uncorrected. Optical rotations were measured on Equip-Tronics EQ-800 Digital polarimeter in chloroform at 32°C. IR spectra were recorded on Perkin-Elmer RXI (4000-450 cm⁻¹) FTIR spectrometer. 1HNMR were obtained on a Bruker DRX-300 NMR spectrometer at 300MHz. The samples were prepared in CDCl₃ with TMS as an internal reference. The mass spectra were recorded on Jeol SX-102 FAB Mass spectrometer.

Synthesis of 1-aryl-5-hepta-O-acetyl-β-D-maltosyl-2-S-benzyl isodithiobiurets

The required 1-aryl-5-hepta-O-acetyl-β-D-maltosyl-2-S-benzyl isodithiobiurets were prepared by reported procedure.

Synthesis of 3-Hepta-O-acetyl-β-D-maltosylimino-5-phenylimino-1,2,4-dithiazolidine hydrobromide

1-Phenyl-5-hepta-O-acetyl-β-D-maltosyl-2-S-benzyl-2,4-isodithiobiurets (4.59g, 0.005 M) was made into paste with chloroform (5 mL) and to it was add bromine solution in chloroform (20 % Br₂ in CHCl₃, v/v)
drop by drop with stirring. The bromine solution in chloroform was added till evolution of lachrymatory fumes of benzyl bromide ceased. An orange red sticky mass was obtained. It was then allowed to stand for 5-6 hr. The sticky mass was washed several times with petroleum ether (60-80°C) and then was triturated several times with small quantity of ethanol to removed excess bromine. Some quantity of product went into ethanol, after some time it was separated out. The product obtained was acidic to litmus and recrystallise from ethanol water. On extending to other 1-aryl-5-hepta-O-acetyl-β-D-maltosyl-2-S-benzyl-2, 4-isodithiobiurets (IIIb-g), the related products (IVb-g) were isolated.

RESULTS AND DISCUSSION

IV(a) : 3-Hepta-O-acetyl-β-D-maltosylimino-5-phenylimino-1,2,4-dithiazolidine hydrobromide
Yield 73%, M.P.148°C, [α]D +214°(c,0.2800 m, CHCl3), RF-0.69 (CCl4:EtOAc,3:2), IR (KBr)\(^16\): v 3343 (N-H), 2939.5 (ali. C-H), 3343 (N-H) ,1749.8 (C=N), 1230 (C-N), 1134 (C-O), 1038.6 and 908.2 (characteristic of maltose), 600.6 cm\(^{-1}\) (C-S) ; \(^1\)HNMR\(^17\)(CDCl\(_3\)): δ 7.40-7.37 (d, 1H, NH), 6.82 – 7.60 (M, 5H, Ar-H), 6.17 – 6.15 (m,14 H,maltosyl ring protons); 2.3-2.0 (m, 21H,acetyl); Mass (m/z)\(^18\) : 826 (M\(^+\)+1), 619, 559, 168.8, 109; Anal. Calcd. for C\(_{34}\)H\(_{41}\)O\(_17\)S\(_2\)N\(_3\); C, 49.33; H,4.95; N,5.07; S,7.73 found C, 49.03; H 4.97; N, 4.98; S, 7.81%.

IV(b) : 3-Hepta-O-acetyl-β-D-maltosylimino-5-o-Cl-phenylimino-1,2,4-dithiazolidinehydrobromide.
Yield 64%, M.P. 160°C, [α]D + 35.71°(c, 0.2800 m,CHCl\(_3\)), RF-0.57 (CCl\(_4\);EtOAc,3:2), IR (KBr)\(^16\): v 3343 (N-H), 2969.0 (ali. C-H), 1749.3 (C=N), 1234.7 (C-N), 1134.4 (C-O), 1037.4, 937.9 and 901.4 (characteristic of maltose), 600.6 cm\(^{-1}\) (C-S) ; \(^1\)HNMR\(^17\)(CDCl\(_3\)): δ 7.7 - 7.6 (d, 1H, NH), 7.6 – 7.0 (M, 4H, Ar-H), 6.15 – 6.9 (m, 14H, maltose unit); 2.2 -  2.0 (m, 21H, acetyl); Mass (m/z)\(^18\) : 861 (M\(^+\)+1), 695.9, 168.7, 109; Anal. Calcd. for C\(_{34}\)H\(_{40}\)O\(_17\)S\(_2\)N\(_3\)Cl; C, 47.38; H, 4.64; N,4.87; S, 7.43% found C, 47.35, H, 4.60,;N, 4.80;S, 7.50%.

Table–1: Hepta-O-acetyl-β-D-maltosylimino-5-arylimino-1,2,4-dithiazolidine hydrobromide (IV a-g).
Reactants :(1) 1-Aryl-5-hepta-O-acetyl-β-D-maltosyl-2-S-benzyl-2,4-isodithiobiurets(III a-g) (2) Bromine
in chloroform.
